CS Error/Bug log

When the method “getDollarAmount” was classed as an int, there was an error (Shown below)

```
public static int getDollarAmount(int pennies, int nickels, int dimes, int quarters)
```

To fix this, I changed the int data type to void to specify that this method shouldnt return any data type (Shown below)

```
public static void getDollarAmount(int pennies, int nickels, int dimes, int quarters)
```
