CS Error/Bug log

My code was correct and would work if the first letter of the last name was UPPERCASE, but when the first letter of the last name was lowercase it wouldnt work.

When first letter of last name is uppercase (Show below)

```
Enter your first name:
Misha
Enter your last name:
Stanev
Misha Stanev is assigned to Group 2
```

When first letter of last name is lowercase (Shown below)

```
Enter your first name:
Misha
Enter your last name:
stanev
```

To fix this I made a new variable lastNameFLUpper which would turn lastNameFL into an uppercase letter if it wasnt already so first letter of last name would always be uppercase (Shown below)

```
char lastNameFLUpper = Character.toUpperCase(lastNameFL);
```
